

## Infrastructure Enhancements at Middle Point Landfill

February 5, 2020

**MURFREESBORO, Tenn. (Feb. 5, 2020).** As part of our ongoing commitment to safe and responsible landfill operations, the Middle Point Landfill team announced today infrastructure projects recently completed or currently underway at the facility.

Last month, we completed installation of a new enclosed landfill flare on-site. An upgrade from the previous flare, this version increases the capacity to collect and safely destroy landfill gas generated at the Landfill. Late last year we also completed development of a new disposal cell within the permitted landfill. As part of this development, we are now in the process of installing additional landfill gas infrastructure, which will tie in to the existing landfill gas system to continue safe and responsible landfill gas collection and control once the new disposal cell comes online.

We anticipate completing the landfill gas infrastructure project by early spring. Our team will provide updates to you as we make progress on these enhancements.
