

Rock Mining Event to Begin this Week

March 18, 2020

MURFREESBORO, Tenn. (Mar. 18, 2020) – As a good neighbor and responsible operator, we want to make you aware of an upcoming, on-site rock mining event that will begin on Thursday. The rock, which is mined from the old Mathews Property on the east side of Landfill Road, is crucial for certain infrastructure that supports landfill operations, such as maintenance of on-site roadways and routine gas well installation or repair work. The timing of this event is particularly important, given the recent heavy rains which can take a toll on such support infrastructure.

Rock mining will begin on Thursday, between 7 a.m. – 5 p.m., with most work occurring between 1:00 – 2:30 p.m. This event is expected to continue on non-consecutive weekdays over the next three weeks. As always, we will prioritize safety above all else, including following to all required safety precautions and adhering to the permit issued by the State Fire Marshall.

Our entire team thanks you in advance for your understanding and patience as we conduct this important event. We will keep you informed of our progress.
